With all the photos, video and music files on your computer, wouldn't you like software that can actually simplify things? ArcSoft PhotoImpression® 6 not only manages your media for you, but also gives you tons of fun and exciting ways to enjoy it.

ArcSoft
photoImpression® 6

Picture things easy

Stay Organized Without Even Trying
Even if your digital media is scattered all over your computer, PhotoImpression smartly and automatically organizes it all for you. The Calendar Browser lets you view files by date. The Import History Browser oraganizes files based on when they were copied to your computer. The Folder Browser gives you a Windows-like view. The Stack feature lets you stack your photos into virtual piles.

Enhance Photos Step-by-Step
The built-in Easy Fix Wizard makes photo enhancement a step-by-step process that users of all levels can appreciate. In just seconds, bad photos become pictures worth printing. Edit options include: Straighten, Crop, Enhance, Sharpen, Fix Red-Eye and Improve Color.

Push Pixels to New Places
When you're ready to take your photo editing beyond the basics, a set of advanced tools give you pixel-level control. The Heal and Clone tools make skin blemishes and distracting objects magically disappear. The Clipboard lets you copy and paste elements from one photo to another.

Edit Hundreds of Pictures at Once
When you're working with huge numbers of photos, having a batch processing tool is key. Rotate, resize and rename an entire collection of pictures with just one click.

Find Files Fast
Powerful text-based and tag-based searching helps you quickly locate specific media files from anywhere on your system. Unique photo-based searching uses a photo's color and pattern to find other similar photos.

Apply High-Quality Vector Graphics
Ready to get creative? A handful of vector graphic tools let you apply high-quality text and artwork to your pictures. The program comes with frames, transparent edges, speech balloons, clipart, greetings and more.

Create Dynamic Slide Shows
Turn your favorite snapshots and MP3 soundtracks into dazzling picture slideshows complete with pan and zoom effects and slide transitions. Save your shows as screensavers, video files and self-running .exe files ready to burn to disc and share with family and friends.

Work with RAW and 48-bit Image Files
Currently supports Canon, Nikon, Panasonic, and Adobe RAW files (browse, open, email, print). Also has 48-bit image file support with basic editing (crop, brightness/contrast).

Tag and Rate Photos
Applying rating and tag icons to your media keeps things organized and easy to find. More than one dozen useful tag icons are included (ie. family, friends, pet, holiday, birthday). You can even create custom tag icons using your own pictures.

Play Music and Video Back-to-Back
The built-in Media Player lets you enjoy your video and music files without having to launch another program. What's more, the Media Player will even play video and music files back to back, automatically.

Put Yourself on a Postage Stamp
Mailing cards or invitations? PhotoImpression's built-in PhotoStamps™ feature lets you create and order real U.S. postage featuring your own digital pictures. It's a fun and unique way to customize your envelopes and packages.
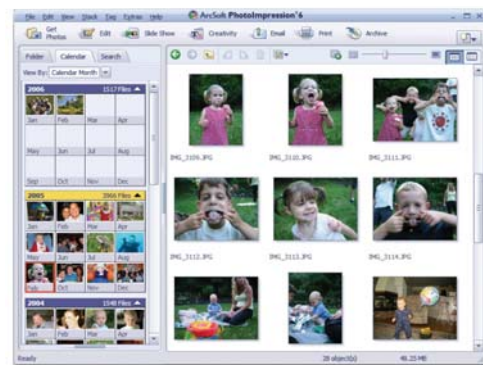

Email Pictures Effortlessly
Turning mega-pixel photos into reasonably sized email attachments can be a hassle, but PhotoImpression's Easy Email feature makes sharing pictures quick and painless.

Print With Confidence
Printing at home can be a tricky and costly process. That's why PhotoImpression provides the most critical tools and options along with the preview of your print page: crop, rotate, print size, paper size, media type, and orientation.

Backup Media to Disc
The built-in Easy Archive feature lets you create CD and DVD backups of your pictures, music and video files without ever having to launch another application.

The Calendar Browser can organize media by month or day.
